INVESTMENT THESIS

Caution offers a verifiable compute platform for sensitive workloads, aiming to solve the problem of unreliable proof of execution in production environments, particularly for high-risk industries [1].

TEAM

The team comprises engineers with experience in securing high-risk systems, as evidenced by their previous work with Distrust, involving clients like hedge funds and critical grid operators [1].

PRODUCT

Caution's product is a hosting platform that enables the deployment of workloads to secure enclaves with cryptographic proof of execution. It addresses the gap in tooling for confidential computing by offering a simple, git-based workflow [1].

MARKET

The market for Caution includes industries with high-risk systems such as AI, fintech, healthcare, and regulated data collaboration. The platform is designed to fit into existing workflows rather than replace them, suggesting a broad potential market [1].

WHY NOW

The increasing migration of sensitive data and applications to the cloud, coupled with the inadequacy of 'trust us' security models, creates a timely opportunity for Caution's verifiable compute platform [1].

DIMENSION SCORE BREAKDOWN

Workflow Pain
8/10 / 25% wt

Speed To Value
6/10 / 20% wt

Compounding Advantage
7/10 / 20% wt

Team Execution
7/10 / 15% wt

Market Distribution
5/10 / 20% wt

KEY RISKS

- The risk of market adoption, as the platform requires integration with existing systems and a shift in security paradigms [1].

WHAT CHANGES OUR MIND

- Evidence of significant customer adoption or partnerships with major cloud providers.
- Demonstrated security incident prevention attributed to Caution's platform.
