INVESTMENT THESIS

DeepReach Inc. aims to build a real-world data network for robots and world models by capturing authentic, diverse data from local experts across various environments. The company designs and manufactures wearable devices for data collection, creating a scalable and distributed model that could provide valuable data to AI and robotics companies [1].

TEAM

Reported team size is 6, but specific credentials and execution evidence are not disclosed [1].

PRODUCT

The product involves wearable stereo capture devices for local data partners to collect real-world operation data. The company claims to have 475 devices in the field and 100+ data partners across 7 countries [1].

MARKET

The market appears to be B2B, targeting frontier model and robotics companies. The ICP and credible market size are not clearly defined [1].

WHY NOW

The company is scaling to 10,000+ devices across 50 countries, indicating a potential growth catalyst [1].

DIMENSION SCORE BREAKDOWN

Workflow Pain
6/10 / 25% wt

Speed To Value
5/10 / 20% wt

Compounding Advantage
7/10 / 20% wt

Team Execution
4/10 / 15% wt

Market Distribution
5/10 / 20% wt

KEY RISKS

- The reliance on local data partners for data collection could introduce variability and quality control issues [1].

WHAT CHANGES OUR MIND

- Evidence of significant customer traction and measurable value for AI and robotics companies.
- Detailed financials and clear market sizing.
