--	------------------------------	---------------------------------	-----------

INVESTMENT THESIS

hiloop provides infrastructure for recursive self-improvement in AI agents, targeting teams that require frequent, high-performance model training and optimization [1].

TEAM The team size is reported to be 2, but specific founder credentials and experience are not disclosed [1].	PRODUCT hiloop's product is an infrastructure platform for automated research, enabling teams to train and optimize AI agents and models. It offers features like persistent memory, full experiment lineage, compute orchestration, and statistical verification [1].
MARKET The market for hiloop's product is teams focused on high-performance AI research and model training. However, specific market size, ICP clarity, and route to customers are not disclosed [1].	WHY NOW The timing is driven by the increasing need for high-performance, reproducible AI research and model training, particularly in teams where performance is critical [1].

DIMENSION SCORE BREAKDOWN				
Workflow Pain 7/10 / 25% wt	Speed To Value 6/10 / 20% wt	Compounding Advantage 5/10 / 20% wt	Team Execution 4/10 / 15% wt	Market Distribution 5/10 / 20% wt

KEY RISKS - The small team size may limit the company's ability to scale and execute [1]. - Lack of disclosed traction metrics raises questions about market validation [1].	WHAT CHANGES OUR MIND - Disclosure of specific traction metrics and customer testimonials. - More detailed information about the team's experience and execution capabilities.
