## INVESTMENT THESIS

Lyon builds private foundation models for banks, insurance companies, and fintechs, leveraging proprietary transaction data to predict various customer outcomes and offering a potentially defensible advantage through data control and model customization [1].

### TEAM

Reported team size is 2, with founders from Stanford and NVIDIA, backed by Y Combinator [1].

### PRODUCT

Lyon's product is a private foundation model that learns from a company's proprietary transactions, payments, clicks, and customer interactions to predict various customer outcomes. The model runs inside the company's cloud, ensuring data and intelligence remain under its control [1].

### MARKET

Targeting banks, insurance companies, and fintechs, with early adoption by a major insurer and a fintech serving tens of millions of active users [1].

### WHY NOW

The increasing need for personalized and accurate customer predictions in the financial sector, coupled with the rise of AI and machine learning technologies, makes now an opportune time for Lyon's solution [1].

## DIMENSION SCORE BREAKDOWN

Workflow Pain  
8/10 / 25% wt

Speed To Value  
7/10 / 20% wt

Compounding Advantage  
8/10 / 20% wt

Team Execution  
5/10 / 15% wt

Market Distribution  
7/10 / 20% wt

### KEY RISKS

- Dependency on a small team size of 2 for execution and scaling [1].

### WHAT CHANGES OUR MIND

- Evidence of significant revenue growth or additional high-profile clients.  
- Detailed case studies or testimonials from current clients showcasing the impact of Lyon's models.
