INVESTMENT THESIS

Stoa aims to create a marketplace for trading AI hardware, providing pricing and trading infrastructure for GPUs [1]. The company seeks to address the inefficiencies in GPU supply and demand by offering a platform for verified trades and price discovery [2].

TEAM The team consists of three members: CEO, CFO, and CTO [3]. However, detailed founder credentials and experience are not disclosed [3].	PRODUCT Stoa's product is a marketplace for trading AI hardware, specifically GPUs [2]. The platform aims to provide verified trades, price discovery, and a structured path for executing trades [2].
MARKET The market for AI hardware trading is fragmented, with supply and demand signals often staying in private channels [2]. Stoa aims to capture these signals and provide a market view for participants [2]. However, specific market size and distribution motion are not disclosed [2].	WHY NOW The increasing importance of AI hardware in various industries and the growing demand for GPUs make now an opportune time for a platform like Stoa [2].

DIMENSION SCORE BREAKDOWN

Workflow Pain 6/10 / 25% wt	Speed To Value 5/10 / 20% wt	Compounding Advantage 4/10 / 20% wt	Team Execution 3/10 / 15% wt	Market Distribution 5/10 / 20% wt
---------------------------------------	--	---	--	---

KEY RISKS - The small team size may limit the company's ability to scale and execute [1]. - The market for AI hardware trading is still emerging, and Stoa's ability to capture market share is uncertain [2].	WHAT CHANGES OUR MIND - Evidence of significant traction, such as a large number of verified trades or prominent customers, would change the decision. - Clear financials showing revenue growth and profitability would also be a strong positive signal.
