--	----------------------------	---------------	-----------

INVESTMENT THESIS

Vorelios aims to replace slow and costly engineering simulations with AI that performs the same tasks 1000x faster, potentially revolutionizing the engineering workflow [1].

TEAM	PRODUCT
Team size reported as 2 [1]. Execution evidence not disclosed.	AI solution that simulates physics 1000x faster than traditional methods [1].
MARKET	WHY NOW
Targets engineering workflows, but specific ICP, market size, and distribution strategy are not disclosed [1].	The increasing complexity and cost of engineering simulations make this solution timely [1].

DIMENSION SCORE BREAKDOWN				
Workflow Pain 8/10 / 25% wt	Speed To Value 6/10 / 20% wt	Compounding Advantage 4/10 / 20% wt	Team Execution 3/10 / 15% wt	Market Distribution 2/10 / 20% wt

KEY RISKS	WHAT CHANGES OUR MIND
- Small team size may limit execution capabilities [1]. - Lack of disclosed traction or customer validation [1].	- Evidence of significant customer adoption or partnerships. - Detailed financials and growth metrics.
